

MultiSurface Neutral Cleaner

Effective for **30 Days** after dispensed

MultiMicro 200 Disinfectant

Effective for **7 Days** after dispensed

IMPORTANT: ALWAYS CLEAN FIRST BEFORE DISINFECTING!

Surfaces: Metal (chrome/aluminum), stainless steel, glass, laminate, plastic, ceramic, painted, sealed wood, other non-porous surfaces

Do NOT use on white boards, electronic devices, computer screens, porous surfaces

Process: Cleaning with Orbio MultiSurface Cleaner

USE BLUE LABELED PRODUCT FOR THESE STEPS:

1. Spray wiper/towel
2. Clean from left to right, high to low
3. Clean surface to remove stuck-on-dirt

Process: Disinfection with Orbio MultiMicro 200

USE YELLOW LABELED PRODUCT FOR THESE STEPS:

4. After cleaning, wet the surface with the spray bottle
5. Allow the treated surface to remain wet for at least 10 minutes

All bottles must have proper labels on them. Spray bottles with solution but not properly labeled are considered hazardous waste and must be properly disposed of by Environmental Health and Safety office. Bottles supplied to you will be properly labeled and dated with the expiration date of the product once dispensed. When expired or needs to be refilled, the date will be updated on the bottle with the new expiration date.

Efficacy: MultiMicro 200 is an effective food contact and non-food contact surface sanitizer as well as a one-step cleaner-disinfectant at the same 200 ppm FAC concentration. Efficacy testing has been performed using the procedures in accordance with EPA-registered disinfectants and sanitizers. Testing of MultiMicro 200 has been performed by a third party laboratory under good laboratory practice (GLP) regulations¹. In order to establish efficacy claims as a one-step cleaner-disinfectant, a defined amount of organic soil must be incorporated into the test protocols. All cleaner efficacy tests were passed in the presence of 5% organic soil, supporting the claim of MultiMicro 200 as a cleaner-disinfectant under EPA regulatory guidelines.
